Top ten research priorities for coeliac disease

Coeliac UK Research Conference, 15 March 2018

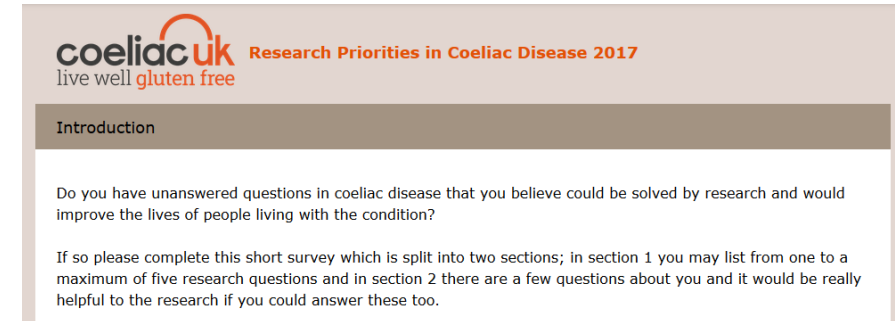

James Lind Alliance

- Patients, carers and clinicians should work together to agree which, among those uncertainties, matter most and deserve priority attention.
- Raise awareness of research questions which are of direct relevance and potential benefit to patients and the clinicians who treat them.
- List of agreed Research Priorities.

The process...

- 1st survey June 2017
- > 1000 respondents
- > 2500 questions
- Steering Group – 43 indicative questions

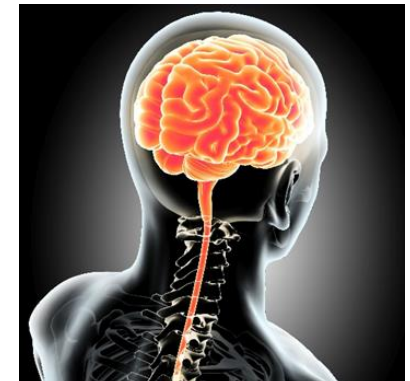

The process...

- 2nd survey Dec 2017
- 26 questions
- Workshop – top ten research priorities agreed

Priorities one, two and three...

- Finding the triggers for coeliac disease
- Better support for healthcare professionals
- Understanding neurological forms of coeliac disease

Priorities four, five, and six...

- Finding less invasive tests to recognise coeliac disease
- Understanding the link between coeliac disease and other conditions
- Finding the best post diagnosis support

Priorities seven, eight and nine...

- Improving safety for people eating outside the home
- Finding a cure for coeliac disease
- Preventing the onset of coeliac disease

Priority No. 10...

How can we better understand the causes of refractory coeliac disease types I and II and use this understanding to develop and improve diagnosis and treatment?
